Groups within and outside your company rely entirely on the accuracy and completeness of your engineering drawing management processes include business rules that define which document and part types are supported, how item numbers are assigned, how drawings are revised, who approves changes to part & drawing revisions, the conditions under which parts are qualified for use, and a host of other details. The essential output of engineering design is not a simply product, but the technical data necessary for replicating the product accurately, consistently and efficiently. Solid Edge offers simple drawing layout, diagramming, annotation, and dimensioning controls that automatically comply with drafting standards (IIS), American National Standards Institute (ANSI), British Standards (IIS), among others. From electronic file management in a centralized data library to change workflow that encourages detailed design reviews, PDXpert PLM software solves many of the document control challenges that face growing companies. However, managing the engineering drawing package throughout a product's life cycle is a major challenge for companies facing rapidly-changing market conditions, a fluid supply chain, and new regulatory requirements. With Solid Edge, you can easily share 2D drawings with other teams, suppliers, and customers, even if they don't have Solid Edge installed. Solid Edge installed. fast. Catalogs searchable Part Numbers Registered Engineers & Designers Product Data downloads Searches per year For Part Manufacturers & Distributor, TraceParts 3D Digital Product Marketing can really work for you! Join hundreds of Part Vendors who already publish their 3D product catalogs with TraceParts to generate thousands of sales-ready Leads. While engineering drawing practice has been defined by early standards, these simply specify the engineering drawing content, and not its management and control. As changes are made to the 3D model, a graphical indication alerts designers when drawing views are out of date, while a build-in tool alerts the user to what changes were made. No application fee! Early-stage startups in business for less than three years can apply to get Solid Edge for free. Engineering drawing management with PDXpert PLM software provides a comprehensive set of engineering drawing management capabilities that in-house document control solutions can't match. Solid Edge optimizes for speed and performance by taking advantage of multi-core processors, supporting the creation of simplified assemblies, and letting you choose between draft quality and high quality views. PDXpert PLM software provides these exact benefits. Solid Edge Free Trial Capabilities Easy CAD drawing and drafting with Solid Edge automatically creates and updates drawings from 3D models, guickly creating standard and derived views, including auxiliary, section, detail, broken and isometric views. Product lifecycle management improves your engineering data availability and security, while reducing its cost. Engineering drawing content Your engineering drawings are the essential communication method for conveying design data. Because Solid Edge 2D Drafting is fully compatible with the commercial version of Solid Edge, there is no loss of drawing integrity as a result of data translation. On the other hand, an engineering drawing package that is identifiable, searchable, reviewable, and immediately available significantly reduces product costs by simplifying design, procurement, manufacturing, customer training and field service. But as product designs and assemblies become more complex, and with a host of global drawing standards to consider, creating, annotating, annotating, and updating drawings can be a challenge. Download PDXpert PLM software to see how a PLM solution can help your company. Documenting the manufacturing of sheet metal parts can be done with bend sequence, angle and direction. Publish your Catalog For Digital Marketers We've got the audience. Product lifecycle management software is the evolutionary descendant of simple "engineering drawing control" software. Engineering drawing must be identified, reviewed, approved and distributed to affected personnel. PDXpert PLM software provides these engineering drawing management capabilities: fast, attribute-driven eng tabulated drawing schemes flexible item revision rules, including optional pre- and post-production for mats pre-defined part and drawing, part, BOM and design file release management with approval workflow These functions translate directly into real benefits including increased sales revenue through faster product releases; lower product costs by using the most current engineering drawings and parts; and lower administrative overhead by providing important supporting information (like cost and material roll-ups) automatically. Accurate, up-to-date information is crucial to a correctly manufactured product. QuickSheet templates can be used to automatically populate a drawing with predefined standards such as views, parts lists and annotations. An engineering drawing that can't be identified correctly, or has unapproved content, or has simply "gone missing" can't contribute to the quality of a product. Engineering drawing management capabilities should include efficient methods for creating design document and part data records, managing assembly structures, storing electronic file attachments, and processing engineering change forms. They're just waiting for you! If you are targeting Engineers and Design Professionals, we've got the perfect audience for you! With 900,000 opt-in addresses and 4 million unique visitors each year, TraceParts is one of the fastest growing Engineering drawing management capabilities and, equally important, automates and enforces the many processes necessary for good engineering data management. Detailing drawing views can be automated by retrieving part or assembly dimensions; a full complement of dimensions; a full complement of dimensions and annotation commands are also available. Contact Us Products Industries Company Store Siemens Digital Industries Drawings are the final deliverable for many engineering processes—they represent a contract between design and manufacturing—which means that accuracy is critical. Our free tool, Solid Edge 2D Drafting, allows easy data sharing of native draft files, and provides drawing layout, Goal Seeking, diagramming, and dimensioning capabilities. Learn more about how PDXpert PLM manages your engineering drawings PDXpert PLM has been specifically designed for smaller organizations making the transition from ad hoc product data management. In addition, when working with large assemblies, Solid Edge allows you to place drawing views based on a search query and turn off all the components that are not essential for the purpose of the view. And, PDXpert PLM software goes beyond just engineering document control by including the functions essential for managing the complete product design life cycle, such as part records, bills of materials, engineering changes and materials management. You can choose from a number of different display options, such as shaded, to ensure your documents communicate their intent as clearly as possible. Solid Edge also automates the creation of exploded views, balloons, parts lists and bills of material for models of any size. Video Current Topics Easily create accurate technical drawings with Solid Edge. Parts lists with automatic ballooning can be added to assembly drawings, where the list is an exact match of the parts in the model - even for nonphysical parts such as paint. Engineering drawings and data have been created, captured, approved and published. With Solid Edge, you have full control over every element of your drawings, allowing you to easily make updates if standards change. In most cases, the engineering drawing package is created using computer-aided design (CAD) software, but may occasionally include paper documents, photographic film, computer software on CD, and other physical media. With Solid Edge, drawing layout, detailing, annotation and dimensioning controls automatically comply with the mechanical drafting standard you select. With significantly fewer hidden lines to calculate, drawing management As engineering departments' requirements have expanded, engineering drawing management solutions have become more sophisticated. A complete engineering drawing management solutions have become more sophisticated.
